Linda

Here is information from Dave Werbach regarding the TMDL:

Lake Petenwell is part of the Wisconsin River TMDL project currently underway by WDNR. The TMDL will address total phosphorus in this lake, as well as the entire WI River basin and several of the major lakes. Lake Petenwell and Castle Rock Flowage are receiving special attention from the state due to the algal blooms.

The TMDL has been in development for several years, and a public meeting by WDNR is scheduled for August 22, 2018, where the TMDL will be discussed and the public can provide comments. I will forward the original email to Kevin Kirsch, who is the WDNR TMDL contact.

Lake Arrowhead is listed as impaired, but is not part of this TMDL effort yet. The state is gathering additional data on numerous lakes in the watershed to determine if the proposed TMDL will be sufficient, or if an additional TMDL will be needed for each of the lakes.

Is Lake Petenwell/Wisconsin River part of a TMDL? If yes, what did it say about nutrient reductions?

Below is an e-mail from Nancy Eggleston asking if we are going to do anything to protect Petenwell Lake.

Subject: Armenia Water issues

Hi Cheryl and Bruce,

Are any of the Departments involved considering the impacts of nitrates in the Armenia/Port Edwards area on the Wisconsin River flowage, Lake Petenwel, etc? Will the grower's association or the Central Sands Dairy be asked to address that concern as well? Just wondering where we were at with this. Thanks. The Petenwel beaches on the Adams County side were closed due to blue green algae. We had an illness reported after swimming in Lake Arrowhead.

Nancy
